

# Heavy Duty Curing / Frost Blankets

Our new Heavy Duty Frost / Curing Blankets offer a manageable and realistic method for curing concrete in cold and adverse weather conditions. With cold weather slowing down concrete cure times and significantly holding up construction projects these curing blankets have become a popular solution.

A reinforced PVC cover protects the insulated core providing a blanket that is durable and heavy, this allows the Curing Blanket to remain flat ensuring the slab is properly protected.

## Dual sided

The cover is dual sided to draw heat in the winter and reflect heat during the summer. This offers great all-year-round value.

## Easy to hold in position

Featuring brass eyelets at 1 metre intervals around the border which allows the curing blankets to be secured in high winds.

## Quick curing times

This curing blanket cures concrete 2.8 times faster than a typical insulated blanket or tarp and properly maintains moisture throughout the hydrating process.

Easy storage and re-usable.

Cold weather side.

Hot weather side.

Product Code: FRPVC63

Dimensions: Length, 6 metres. Width, 3 metres.

U-Value 1.16 W/m<sup>2</sup>K
